

Specifications		
Item		Specifications
Print head		Piezo-electric drop, on-demand
Resolution		300×300dpi, 600×600dpi, 1,200×1,200dpi, 1,200×2,400dpi
Ink		Original UV-curable ink (YMCKLMc + White) 400cc ink cartridge for each color
Maximum print area		600×500mm (23.6"×19.7")
Distant accuracy	Absolute accuracy	0.1mm (0.0039") or less
	Repeatability	±0.2mm (0.0078") or less
Perpendicularity		0.5mm / 500mm (0.0196" / 19.6")
Waste ink tank		Bottle type (2 liters) with sensor
Media size	Roll	Maximum width: 640mm (25.2") Minimum width: 180mm (7.1") Weight: less than 25kg (55.0lbs.)
	Cut Sheet	640×520mm (25.20"×20.47")
Media thickness	Roll	0.02 to 0.2mm
	Cut Sheet	0.02 to 2.0mm
Media set device		Suction by air vacuum
UV device		Equipped with UV lamp
Interface		IEEE 1394 / IEEE 1284
Applicable standards		VCCI Class A, FCC Class A, ETL (UL 60950), CE Marking (EMC Directive, Low Voltage Directive), CB report, RoHS Directive
Power specification		Printer main unit / UV device, single-phase 200V-240V, 20A
Power consumption		4.0KVA or less
Operational environment	Temperature	15°C to 30°C (60°F to 80°F)
	Humidity	35% to 65% Rh
	Guaranteed temperature	18°C to 25°C (65°F to 77°F)
	Dust	Equivalent to normal office level
Weight		795kg (1,751lbs.) or less
Outer dimension (W×D×H)		2,340×1,920×1,530mm (92.1"×75.6"×60.2")

**UJF-605RII**  
UV INKJET PRINTER

Color Management System

Colors of the finished products can be simulated by creating a targeted profile

### Mimaki Profile Master

Newly-developed software to create profiles for “Raster Link Pro II”.

- By creating target profiles, color management between final printed matter and print by UJF-605RII is now available.
- With ICC profile creation function, creating an input profile of color samples is now available.
- Pure colors can be made without tonal shifts, while intermediate colors with color matching can be reproduced smoothly.
- By using the profile creation wizard, all you have to do is to follow the instructions on screen. This way you can create profiles very easily.

### Raster Link Pro II

Equipped with useful functions to make full use of UJF-605RII as well as providing color management tools.

- By showing the picture in a thumbnail-size image on the data list, the content is obvious at a glance.
- Multiple jobs can be edited and printed at the same time.
- White data is created from color images automatically and printed.
- Some parts of full color image data can be replaced by white ink.

**UJF-605RII**  
UV INKJET PRINTER

Direct Digital Color Proofing for gravure and flexographic packaging.

White ink and six-color UV-curable inkjet printer  
**NEW UJF-605RII**  
**ROLL TO ROLL.**

# UV Curable Inkjet Printer UJF-605RII

Direct print on soft packaging film. New proofing system to dramatically lower running costs.

- UV curable ink

Direct print on soft packaging films
- 1,200 x 2,400dpi

A precise and high quality image is printed
- White ink + CMYKLMc

Back printing with white ink on transparent or colored substrates
- Roll to roll

Non-stop unmanned printing throughout the night
- High speed and low cost

Proofing without cylinder engravings and flexo plates saves time and costs
- Flatbed design

Designed for precise multi-layer printing
- VOC countermeasure

The printer uses UV-curable ink free of volatile organic chemicals
- Ozone-free configuration

The printer's UV lamp does not generate any ozone

## System configuration

**Touch-panel system**  
Uses a touch-panel system with easily operable and easy-to-view wide screen.

**Sub-switches**  
While setting the media, you can perform fine adjustments of film feeding and fixing.

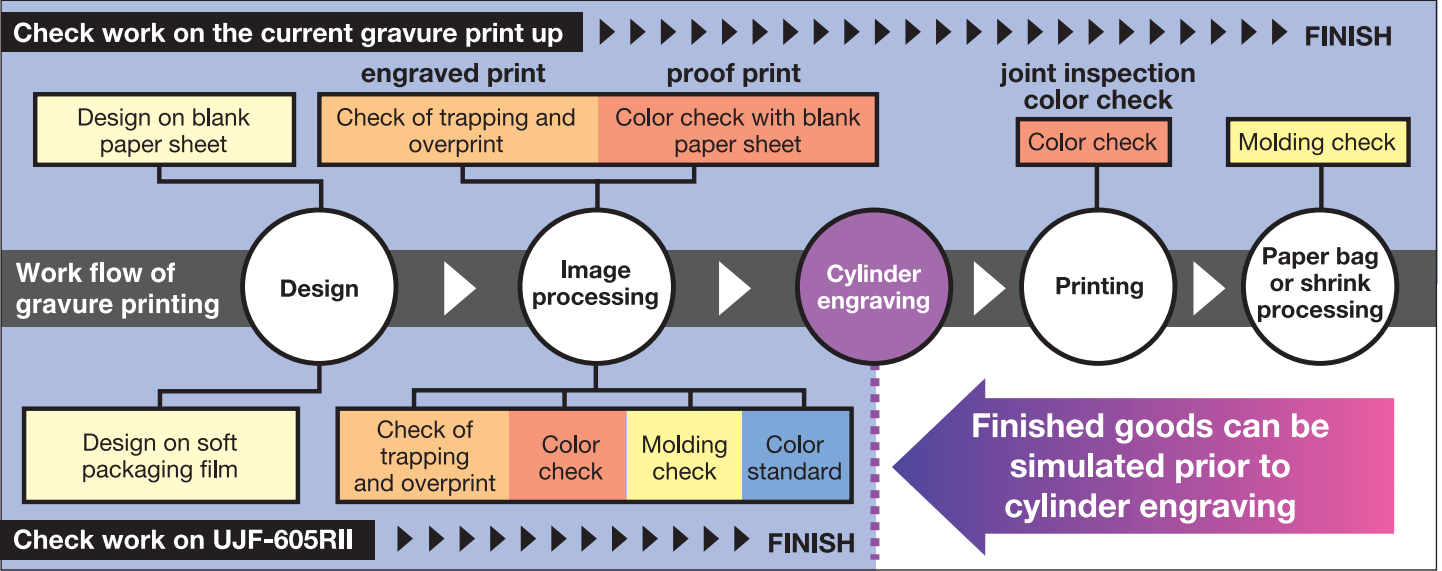

**Vacuum table**  
With newly developed vacuum table, a thin film can be fixed without creasing.

**Tension control function**  
The tension applied to the media is automatically controlled at the pre-set value.

Digital direct print saves time, cost and labor. A long-awaited unit for color-proofing, sample preparation, position confirmation and presentation of mold image.

You can not only confirm the color and position, but also save time and cost greatly compared to the conventional way. Moreover, since it can print directly on soft packaging films, the final products can be simulated such as confirmation of bag shape before engraving of the cylinder.

Roll to roll enables continuous operation. It saves greatly the works of the operators.

As the machine is compatible with roll media, you can perform continuous printing as you like. It can make multiple sheets of color proofs and samples at one time, which can save the operator's a great amount of work. Further, you can propose to your customers not only the design but also a mock-up sample.

Testing will be required for mold processing.

Because of highly precise positioning, multi-color overlaying can be performed without difficulty.

It is now possible to make highly precise positioning of white data and color data. You can confirm the design processing such as white color gradation, trapping and overprint on the soft packaging film which could not be checked by paper proofing.

Crossing of distinctive gradations is also possible.

Design of crossing of distinctive gradations can be confirmed not only on the screen but also on the printed material. Since it can make direct prints on soft packaging films, the simulating of actual crossed colors can be performed before making a cylinder plate.

UV curable ink has a wide gamut and high density.

Mimaki's UV curable ink has a wider gamut. As the gamut has wide warm color areas which abound in the package industry, reproducibility of distinctive designs are outstanding. Since the ink has high density of color necessary for gravure and flexo reproductions, vivid color can be obtained.
